

Nisanth Alex

UI/UX & Frontend Developer

Designing scalable experiences. Building performant interfaces.

I design and build user-centric web applications focused on performance and usability.

About Me

I'm a UI/UX and Frontend Developer specializing in modern web applications.

I translate complex problems into intuitive user experiences and scalable frontend systems.

I focus on performance, clean architecture, and design consistency.

UX/UI

- User Research
- Wireframing
- Prototyping
- Design Systems
- Figma

Frontend

- React
- JavaScript
- Redux / Context
- Responsive Design

Advanced

- Performance Optimization
- Accessibility (a11y)
- API Integration
- Code Splitting

Power Profiler - UX

UX design for visualizing and analyzing power consumption in embedded systems.

Problem

UX design for visualizing and analyzing power consumption in embedded systems.

Goal

Improve clarity and usability of the dashboard.

Solution

Designed a clear, workflow-driven UX focusing on data clarity, fast access, and intuitive visualization.

Impact

Designed a clear, workflow-driven UX focusing on data clarity, fast access, and intuitive visualization.

My Role

- UX Research
- Wire-framing
- UI Design (Figma)
- User Flow Design

Tools Used

- Figma
- User Flow Diagrams
- Wire-frames

UX Decisions

- Reduced cognitive load using clear hierarchy

Outcome

- Improved readability and navigation
- More intuitive user experience
- Better structured data presentation

AI Model Deployer - UI/UX-Frontend

A unified application to simplify and standardize AI model deployment on embedded systems.

Problem

AI model deployment on embedded systems was manual, inconsistent, and error-prone, leading to inefficiencies and frequent mistakes.

Goal

Create a streamlined and reliable system that simplifies deployment workflows and reduces manual intervention.

Solution

- Designed a guided, step-by-step deployment workflow
- Built a unified interface for configuring and deploying models
- Reduced complexity through structured UI and clear actions
- Ensured consistency across deployment steps

My Role

- UX Research & Workflow Design
- UI Design in Figma
- Frontend Development using React
- Built reusable components and structured UI flows

Tech Stack

- React, JavaScript, Material UI, HTML and CSS
- Electron (desktop app environment)
- Component-based architecture
- Python API integration for deployment workflows

Key Decisions

- Introduced step-based wizard flow to reduce errors
- Simplified configuration using structured inputs
- Designed clear feedback states (loading, success, failure)
- Focused on usability for technical users

Impact

- Reduced manual deployment errors
- Improved workflow consistency
- Increased developer productivity
- Made deployment process more intuitive
